SEARCH GPT

# 🕰️ Quick Start Guide 🕰️

Welcome to Search GPT AI.

This short and sweet guide will get you setup with the AI in minutes!

🔥🔥 **You made a smart choice - now let's get going, in seconds** 👇

1. Accessing Everything - Members Area

To visit the **Search GPTAI members area,** log in to your WarriorPlus account - and click your **username** in the red + click "**purchase history**":

There you will find all the recent purchases you made on Warrior - including links to all the Search GPT members pages.

2. Logging In To The Software

You will be able to access all the software tools. **You will have been sent an email with your username/password for SearchGPT so please check that right now.**

If you ever need to login or create an account for a software tool, be sure to use the email address you purchased with on W+.

3. Getting Updates (To AI + Search GPT)

AI is constantly changing (in the last 30 days we have seen GPT Plugins, MidJourney v5, Canva AI, Runway ML and more!). I do regular updates to the core AI tools, free training videos on AI updates, and also webinars with new training and tactics.

To ensure you get access to all this, hit reply to my "welcome email". I will send you a bonus AND it will ensure my email is whitelisted.

4. REQUIRED To Use SearchGPT AI

SearchGPT is a software that uses a complex sequence of tools to give Chat-GPT access to both web search and any website URL. We use our own accounts and software to handle most queries, but there are two specific accounts you will need to create to use the software:

A) CONNECT TO CHAT-GPT
Search GPT connects to Chat-GPT & Dall-E, two AIs that are owned by OpenAI. You will need an "API key" to use the tool. Therefore, if you don't already have an account with OpenAI, you will need to do the following:

1. Create an account with them https://platform.openai.com/account/api-keys
2. Get an API key - https://platform.openai.com/account/api-keys
3. Insert the API key into the settings page of SearchGPT and hit save
4. Then you have connected SearchGPT to the AI. Done.

B) CONNECT TO SERP-API
Search GPT connects to Google search, using a service called SerpAPI. This is free for 100 searches per month, which should be more than sufficient for 99% of users. This is a very powerful service, used by companies like IBM, AirBnB, Shopify & Harvard.
If you don't already have an account with Serp-API, you will need to do the following:

5. Create an account with them https://serpapi.com/
6. Get an API key - https://serpapi.com/manage-api-key
7. Insert the API key into the settings page of SearchGPT and hit save
8. Then you have connected SearchGPT to Web Search. Done.

Once you have completed these stacks, your copy of Chat-GPT is now connected to its own search engine and web browser! There's nothing else to do.

6. My Latest "AI Tech Stack" - May 2023

OK here is my AI tech stack for May 2023, in the rough order which I use them:

1. **ChatGPT - https://chat.openai.com/chat**
   I use this for a whole range of purposes such as creating software, writing sales copy, and doing technical research. If you have $20/month I would definitely upgrade to "Chat-GPT Plus" (click on "your account" on the left) as it gives you access to GPT-4 which is the most powerful model & now also gives you GPT Plugins!

2. **RemixableAI - http://remixable.ai/**
   My own software suite, which is now approaching $300k in dev costs and basically automates every aspect of running a digital product business (either as an affiliate, Youtuber, list builder or product owner). This now has Chat-GPT fully integrated into the tool (for copywriting) along with 30+ training videos on AI. If you want to sell your own product this is indispensable. For example, Upsell 4 for SearchGPT lets you create unlimited AI graphics, and the wrap those graphics into software tools (thus creating unlimited software tool). I then used Remixable AI to make me an entire sales letter + video which you can preview here https://remixable.net/ecover/ - this is made with Remixable, better than 90% of the pro sales letters you see on Warrior.. And yet *I'm not even bothering to sell it* (just including it as a bonus within Remixable). I really can't stress enough how much of a level up Remixable AI is for everything I do)

3. **MidJourney - https://www.midjourney.com/**
   The top AI graphics tool. Word is they are entering "alpha" on a website hosted version of the tool - no more Discord in June? Hope so! 90% of the images on my site are done with MidJourney. It is simply the best tool for graphics out there. Only problem with MJ is the cost ($10/$30/$60 per month although $10 will suffice for most people). Honorable mention - https://www.bluewillow.ai/ which isn't quite as good as MidJourney but works very similar, uses the same prompting system and has one big benefit - it's free!

4. **Leonardo AI- https://leonardo.ai/**
   The best, most consistent graphics tool for using the "Stable Diffusion" model. Again has the added benefit of being free! This one is technically "waiting list" although in practice, it only takes 24-48 hours so go ahead and request your invite now. Leonardo has a great free plan, so if you're on a budget and just want a quick way to make AI graphics with no fuss, then this + my VinciVisions app could be your simple win.

5. **PlaygroundAI- https://playgroundai.com/**
   Powerful tool running Stable Diffusion. Has inpainting/edit feature, but IMHO not quite as good as Leonardo. This does give you more flexibility though, so if you're a big artist or just want to pull back the hood and go "full nerd" then this could be the Diffusion model for you.

6. **Kaiber https://www.kaiber.ai/ + Runway ML- https://runwayml.com/**
Both video creation tools. Runway's "GEN-1" feature and Kaiber both let you upload a video (eg from a stock photo website like Pexels) and then enter a text prompt or image to style your video. Runway now allow you to create up to 15 secs of video at a time (as of 27th April), but I currently prefer Kaiber for "remixing videos in new styles". However, Runway does have MANY different features I've barely had time to play with (like the green screen background removal and interpolation which merges images into a seamless transition) Could have played a bigger part in the SearchGPT sales video.. Alas maybe next time). Runway also rolled out a mobile app, so check that out.

7. **Canva AI - https://www.canva.com/**
Announced a whole suite of AI tools in a big "create" event a few weeks back. VERY powerful when combined with MidJourney (create in MJ, edit in Canva AI). Their "AI Image Editor" is exceptionally good and provides the best inpainting. Simply import an image, click "edit image", choose the AI editor and then enter a command (eg "put glasses on robot"). AI feature only available with their pro plan ($10 month) and it only allows 100 edits per day. Trust me, I found out the hard way!

8. **ElevenLabs - https://beta.elevenlabs.io/voice-lab**
The best AI voice generation tool right now. Clone voices, create voices from scratch. Extremely powerful - especially when chained with something like Remixable Copywriter VSL script > ChatGPT remix it to new niche > Elevenlabs voice-over > Remixable video > Remixable website, to make pages and videos like this in around 1-2 hours.

9. **DallE- https://labs.openai.com/**
As recently as Summer 2022, this was the most exciting AI on the planet. Now it's barely making my top 10! To be fair to OpenAI, they do have other priorities! Also, whilst not *free* this does charge you per image (no subscription). Also, DallE has inpainting (upload an image and edit), although it's not quite as good as Canva AI's inpainting/editing. Categorically, this AI is transformed with my Image Whisperer 2.0 tool plugin and app, though.

10. **OpenAI Playground- https://platform.openai.com/playground**
Run Chat-GPT from a different interface. That's useful if you hit a limit (it's paid, so pretty much always "on"). The playground also lets you enter a "system" message like "pretend you are a pro copywriter" for extra control...

7. Getting The Best From SearchGPT

There are a number of AI tools that I use (well, I use them all!) But the two in particular I recommend are Chat-GPT and MidJourney. Also... Chat-GPT, LeonardoAI (images), PlaygroundAI (images), BlueWillow (images) & ElevenLabs (voice) have **free** plans. If you're on a budget, here are my recommendations...

SOMEWHAT LIMITED BUDGETS...
"I have absolutely no money at all" - get Chat-GPT and use Bing Chat also
"I can only afford $20 per month" - get Chat-GPT Plus (UK and US only right now) and get BlueWillow instead of MidJourney (same prompts work)
"I can only afford $30 per month" - get Chat-GPT Plus and MidJourney basic plan

OR... IF YOU'RE SERIOUS ABOUT MONEY MAKING...
"I am serious about AI, and want the best" - if that's you, then get Chat-GPT Plus. Then get Remixable AI (see below). Next, get MidJourney. Next, get Canva Pro (to access the AI inpainting and editing of images). FInally, consider Runway ML for video. Use all these tools & stay subscribed - big updates happening in April!

8. Final Thoughts

Be sure to check out **Remixable**, my marquee software.

Remixable is the all-in-1 software I used to build ALL pages + videos for SearchGPT! Everything including the software was built with Remixable, Chat-GPT, MidJourney, ElevenLabs, CanvaAI and Dall-E.. Exactly as described in the Remixable training videos!

Basically, Remixable + AI is how I did ALL of the funnel!

- Check out Remixable (now with AI preloaded) here
- Check out the "How I made $1M webinar here"

OK, keep your eye on your email. Big updates dropping in June 2023 - and beyond!

Thanks, Chris
